REWRITING THE RULES
The third part of our series on Brazilian R&D.
Pages 28&29

Established in 1984, Qatargas pioneered the Liquefied Natural Gas (LNG) Industry in Qatar.

Today, we are the largest LNG producing company in the world, with a production capacity of 42 million tonnes per annum (MTA).

Through our People, Operating Excellence, Corporate Citizenship and Innovation in global energy, we safely and reliably deliver LNG to our customers around the world.
After 50 years of operation, the Groningen gas field in the Netherlands is now, and also for the coming decades, able to continue supplying its clients. The facilities have been fully modernized. One key success factor was the long-term relationship of the operating company NAM and its contractors. Siemens has updated the compression and variable-speed drive technologies to ensure the adaptation of the gas supply to fluctuating demand, to slash maintenance requirements, and to maximize environmental performance. Highest availability and low power consumption of all units are the best basis for an eco-friendly and successful operation.

Nothing can stop a real performer.
Eco-friendly compressor technology boosts production

After 50 years of operation, the Groningen gas field in the Netherlands is now, and also for the coming decades, able to continue supplying its clients. The facilities have been fully modernized. One key success factor was the long-term relationship of the operating company NAM and its contractors. Siemens has updated the compression and variable-speed drive technologies to ensure the adaptation of the gas supply to fluctuating demand, to slash maintenance requirements, and to maximize environmental performance. Highest availability and low power consumption of all units are the best basis for an eco-friendly and successful operation.
